Saramonic Blink 500 B5 Feature

The Saramonic Blink 500 B5 is a compact wireless microphone system with two ultra-compact transmitters for Android devices. It is an easy-to-use system that delivers crystal clear, professional-quality sound and is perfect for anyone looking to start using a wireless microphone but doesn't have a budget or need to invest in more expensive equipment.

The Saramonic Blink 500 B5 works great with any Android device running Lollipop 5.0 or higher, and can be used with the free Saramonic Audio Manager app to adjust various settings such as automatic gain control (AGC), low cut filter (LCF), mono mode, stereo channel mode, and more – all with just a touch of your finger! A wireless microphone is a device that allows you to transmit sound through the air.

This allows you to move freely while speaking, singing, or performing without having to worry about being tethered by a cord or wearing it on your head. Here are some benefits of using it:

- Easy to use and set up.
- The device can amplify your voice so it is louder than usual and easier for the audience to hear what you are saying.
- You can move freely while still getting good audio quality from anywhere within the range of the transmitter/receiver pair (some systems have multiple receivers).
- However, there are also some drawbacks:
- Some systems require you to not only purchase a transmitter, but also a compatible receiver – meaning a higher cost.

Key Features

The Saramonic Blink 500 B5 is a compact 2-channel wireless microphone system for Android devices. The system features a 2-channel USB receiver and a battery-free transmitter that is compatible with most smartphones and tablets, allowing you to use your existing mobile device for professional video production, journalism, vlogging, and more. The Saramonic Blink 500 B5 is a pro-quality microphone system that delivers crystal clear sound quality in an easy-to-use package with straightforward setup right out of the box.

Compatibility and Connectivity

The Saramonic Blink 500 B5 is compatible with most Android devices. This device can easily connect wirelessly and via USB-C, providing high quality, low latency audio and a hassle-free experience. To ensure compatibility with your device, the Saramonic Blink 500 B5 requires your device to be running Android 7.0 or higher.

Audio Performance

The Saramonic Blink 500 B5 wireless microphone has crystal clear sound quality. This microphone has high-precision audio features, meaning you will get the best sound for your recordings. The high sensitivity microphone on this device allows it to pick up sound from farther distances than other microphones can. The microphone also has automatic gain control (AGC), which helps ensure that you get a balanced recording. Even if there are sudden changes in sound volume during your performance, it

makes everything sound professional and clear through the wireless transmission. In addition to its high sensitivity and AGC technology, there are other factors that contribute to its exceptional audio quality:

- Low noise floor
- Low distortion
- High frequency response (20Hz – 20kHz)
- Battery Life and Power
- Batteries for the Blink 500 B5 are not included with this purchase.
- The battery life for the Blink 500 B5 is about 6 hours, depending on how many transmitters are used and what type of battery is installed.

Other Specifications

- Digital Wireless Transmission: 2.4 GHz
- Number of RF Channels: 18
- Included Transmitters: 2 x Clip-On with Microphone
- RF Frequency Band: 2400 to 2483.5 MHz
- RF Bandwidth: Up to 83.5 MHz
- Max Operating Range: 164' / 50 m (Line of Sight), 98.4' / 30 m (with Obstruction)
